

Execution Report

Title: **Equilibrium Bitcoin Pricing**

Author: **Bruno Biais, Christophe Bisière, Matthieu Bouvard,
Catherine Casamatta & Albert J. Menkveld**

Full reference: Biais Bruno, Bisière Christophe, Bouvard Matthieu, Casamatta Catherine & Menkveld Albert J. "Equilibrium Bitcoin Pricing" Working paper, February 3, 2022.

The structure and contents of this execution report provided by **cascad** for the certification are similar to those recommended by the [AEA Data Editor](#).

1. DATA DESCRIPTION

This paper relies on data on returns, transactional benefits and costs from the the MtGox bitcoin marketplace, collected from July 17, 2010 to December 31, 2018. For a thorough description of the data, please refer to Section 4 of the paper.

2. CODE DESCRIPTION

For the purpose of this certification, we aimed to check the results displayed in Table 1 and in Figures 9-12. The code for the other Figures were not provided to us (note Figures 1 and 3 contain no results).

The replication materials are divided into four self-explanatory subfolders: "code", "input", "temp", and "output". The "input" subfolder stores one data file, "crypto-pricing-series-daily-2009-2018.xlsx". A Python script, "equilibrium-bitcoin-pricing-model-calibration.py" loads the Excel file, implements the calibration, creates the Table and Figures and stores them in the "temp" folder, before writing down in a pdf file that is exported to the "output" folder.

3. REPLICATION STEPS

The code was downloaded from the **cascad** website, and run using Python 3.10.2 on a computer with 32GB RAM, intel® Core™ i9-9900K CPU @3.60-5.00GHz, and Linux (Debian 11 distribution). Although the code implemented the calibrations and generated the Tables and figures in the "temp" subfolder, it did not export them to a pdf file as it should. When the code imported those outputs to add them to a pdf, we got the following error message: "Exit-code not 0, check result!"

4. FINDINGS

We reproduced Table 1 and Figures 9-12 with perfect accuracy.

4.1. FIGURE 9: BITCOIN RETURNS

Original:

Reproduced:

4.2. TABLE 1: CALIBRATED PARAMETERS

Original:

	μ	λ_0	α_1	β_1	β_2
Starting values (OLS)	0.07	0.9999000000	0.0039	0.69	0.14
Calibrated values	0.07	0.9999202621	0.0038	0.69	0.14

Reproduced:

	μ	λ_0	α_1	β_1	β_2
Starting values (OLS)	0.07	0.9999000000	0.0039	0.69	0.14
Calibrated values	0.07	0.9999202621	0.0038	0.69	0.14
